(54) The earth device for an electric pole

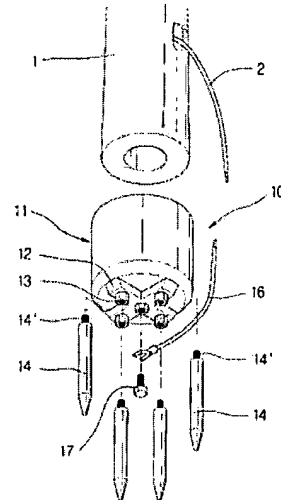

(57) Abstract

PURPOSE

An earth device for an electric pole combined with the electric pole and erected buried underground together to transmit powers to buildings and houses is provided for inexpensive and easy installation, and for lowering earth resistance.

CONSTITUTION

An earth device for an electric pole comprises: an molded insulating cover(11) combined with the lower part of the electric pole(1), having a binding piece(12) with nuts(13) on the undersurface thereof; earth stick(14) combined to the nuts(13) of the cover(11) with bolts; and earth line(16) with one end fixed to the middle of the binding piece(12) of the cover(11) and the other end connected to an extracted line(2) from the electric pole(1); wherein the electric pole(1) is buried underground together with the earth device combined thereto and connected to the extracted line(2).
